

The Ultimate in Express Postural Assessment

Computer Minimum Requirements

The following computer system and software requirements are the expected minimal requirements for the PostureScreen Postural Assessment software. Most computers purchased within the last two years meet these minimal requirements, which include:

Hardware Requirements:

Features	Windows Users
Operating System	Windows XP (all versions) with Service Pack 2; Windows Vista (all version)
Processor	Pentium 3 Processor (or equivalent) or higher
Memory (RAM)	256 MB or higher
Hard Drive	50 GB or larger – Each PostureScreen Report will generate at least 178 KB of space on your hard drive
Optical Drive for Backups	CD, DVD-Rom, Memory card or USB Drive
Monitor and Resolution	Monitor: 17” – 24” Resolution: 1024 X 786
Other	Internet Connection : Cable or DSL
Network	Not Available – This software is only installed on stand alone computers

Equipment Requirements:

Equipment	Requirements
Computer	Desktop PC, Laptop or Tablet
Printer	Any Color Printer Model which prints speed of 2-4 pages/minute Page Setup must be formatted as a 8 1/2 x 11” letter size. Some printers will default to A4 paper and will not print correctly.
Images	All photos must be created in JPG Format
Camera	Any Camera Model with more than 3 mega pixel resolution

Software Requirements:

Software	Requirements
Internet	Any Internet Service Provider will work. Access to high speed internet, once a month, to activate monthly licenses
Operating System	Windows XP or Vista
Other Software	Acrobat Reader Version 7 or higher (Free Download) Microsoft.Net Framework Version 2.0 (Free Download)

Apple/ Macintosh Users: PostureScreen will work on an Apple/Macintosh computer as long as you are able to provide software that will read Microsoft Windows applications. This software will partition your Hard Drive for this access.
